

# **FLYAWAY.**

By Hritik Rudra.

## **Task Given :**

→ FlyAway is a ticket-booking portal that lets people book flights on their website.

→ A search form in the homepage to allow entry of travel details, like the date of travel, source, destination, and the number of persons.

-> Based on the travel details entered, it will show the available flights with their ticket prices.

-> Once a person selects a flight to book, they will be taken to a register page where they must fill in their personal details. In the next page, they are shown the flight details of the flight that they are booking, and the payment is done via a dummy payment gateway. On completion of the payment, they are shown a confirmation page with the details of the booking.

For the above features to work, there will be an admin backend with the following features:

→ An admin login page where the admin can change the password after login, if he wishes

→ A master list of places for source and destination

→ A master list of airlines

→ A list of flights where each flight has a source, destination, airline, and ticket price.

Options available in our FLYAWAY are as follows :

- 1: User Login
- 2: Admin Login
- 3: Just search For Flight

**FlyAway**

Fig 2.1. Now, to book a Flight, the person has to login.  
-> If new user then he has to login as a new user.

The screenshot shows a web browser window with the address bar displaying `http://localhost:8080/FlyAway/UserPage.jsp`. The page has a header with the text "FlyAway" in a large, bold, serif font. Below the header, the title "User Login" is centered. A login form is centered on the page, enclosed in a rounded rectangle. It contains two input fields: "Email" and "Password". Below these fields are two buttons: "submit" and "Reset". At the bottom left of the page, there is a link that says "New User-Create account" and a red underlined link that says "Create Account".

Fig 2.2. If the user is existing user, then he can login with his credentials

The screenshot shows a web browser window with the address bar displaying `http://localhost:8080/FlyAway/HomePage.jsp`. The page has a header with the text "FlyAway" in a large, bold, serif font. Below the header, the text "Welcome null" is displayed. On the right side, there is a link that says "Admin Login". On the left side, there is a link that says "Logout". In the center of the page, there is a search form enclosed in a rounded rectangle. It contains four input fields: "From :-" with the value "hyd", "To :-" with the value "gnt", "Departure :-" with the value "21-04-2021" and a clear button (x), and "Travellers :-" with the value "1". Below these fields are two buttons: "Search" and "Reset".

Fig 2.3. If the user wants to book a flight then he can choose to search the flight and get the result of the flights available.

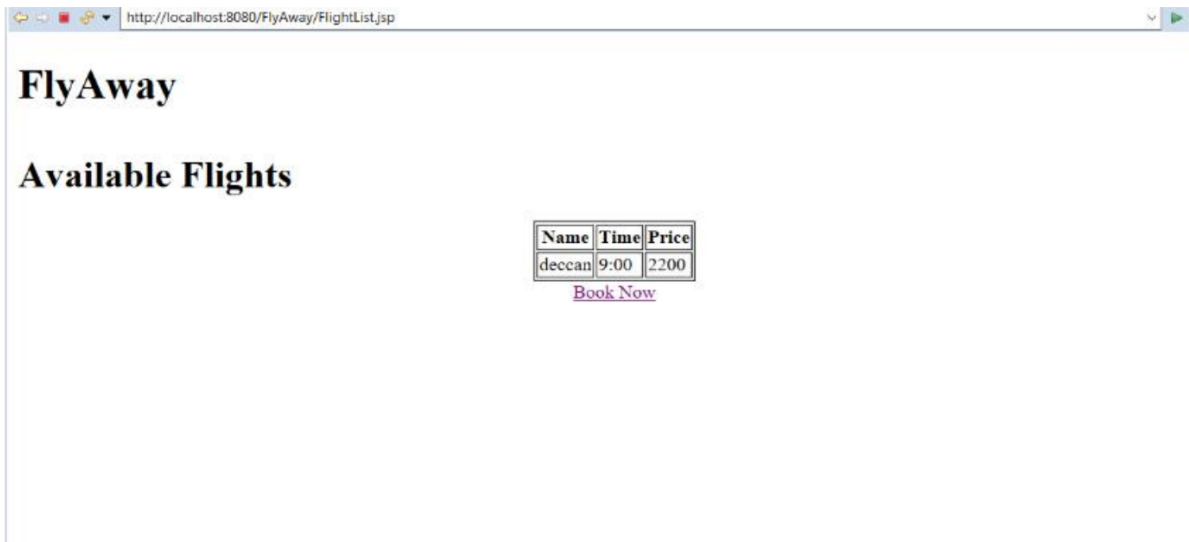

Fig 2.4. The available flights will be displayed.

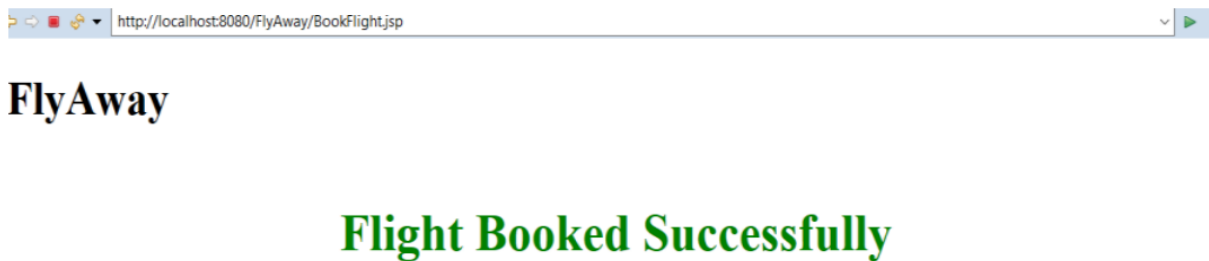

Fig 2.5. After pressing BookNow, the available flight will be booked by the user, and message will be shown on the screen.
